

Multipurpose 'Safety Relay MSR127P'

The MSR127 safety relay can deal with 90% of safety relay applications. The input can be monitor 1 N/C safety contact (single channel), 2 N/C safety contacts (dual channel) with cross fault monitoring or 2 pnp outputs from a light curtain. The unit is available with either automatic or monitored manual reset versions as well as removable terminals.

Stock No.	Manf Ref'	Type	Unit Price

Delayed Output 'Safety Relay MSR138.1DP'

The MSR138.1 safety relay has a set of 2 N/C immediate safety outputs and a second set of 2 N/O and 1 N/C safety outputs which may be delayed. The relay can be connected to 3 possible input configurations: 1 N/C safety contact, 2 N/C safety contact or 2 pnp light curtain outputs. Automatic or monitored manual reset. These units feature removable terminal blocks.

2 Hand Control 'Safety Relay MSR125HP'

The MSR125HP relay may be used to interface to two hand control devices. The relay requires that the 2 input switches operate within 0.5 seconds of each other and will only authorise an on condition whilst both are held down. If one of the switches is released the machine cannot be restarted until both switches have been released.
